02 | WHAT IS GESTYOCAR?

GestYOcar is software designed specifically for the automotive industry that allows you to manage the entire car logistics process, turnkey!

GestYOcar is a comprehensive software that enables car dealerships to increase workflows through modern, customizable web technology.

With GestYOcar (Dealer Management), it is easier to deeply monitor your business and easily expand it.

The software, which integrates seamlessly with other internal systems, not only provides valuable support in customer and sales management, but also facilitates processes in logistics, service and provides useful data for economic and financial control.

03 | OUR SOLUTION

GestYOcar is the ideal solution for growing the business of car dealers.

It enables complete, centralized and digitized management of all movements (pickup, transfer, storage, delivery) of vehicles, as well as secure key management and full control of administrative procedures.

It is possible to determine all processing steps, track and trace all vehicles inside and outside the dealership, know the exact location in the parking lots, organize inputs, sales and rentals, manage maintenance, service and pre-delivery, check inventories and more.

Tracking is automated both through QR codes generated directly by the software and through the capture of external computer streams, such as delivery note, invoices, work orders, car file documents, and more.

GestYOcar is the result of collaboration with several dealerships, and its strength is its continuous implementation and updating.

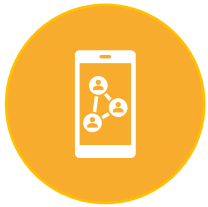

It proposes a modern, intuitive interface and manages data in real time, greatly reducing operational steps and work time.

It is suitable for dealerships with extensive networks and multiple showrooms.
